

WeBlog

NEXT.JS • EXPRESS • PRISMA • POSTGRESQL

Project Overview

WeBlog is a high-performance, full-stack blogging engine. It balances a robust Express + Prisma backend with a seamless Next.js frontend, providing an end-to-end solution for content creators.

Key Capabilities

Content Control

Full CRUD for posts, including drafts and scheduled publishing.

Secure Auth

JWT sessions managed via secure HTTP-only cookies.

Social Ecosystem

Following, notifications, likes, and reading history.

Discovery

AI-ready "For You" feeds and global exploration.

Standard Installation

For manual setup without containers:

```
# Install & Setup Database
npm install --prefix backend && npm install --prefix frontend
cd backend && npx prisma db push

# Start Local Development
# Backend (Port 8080) / Frontend (Port 3000)
npm run dev --prefix backend & npm run dev --prefix frontend
```

Containerized Deployment

Orchestrate the entire stack using Docker Compose for a consistent environment:

1. Build and start services:

```
docker compose up --build -d
```

2. Launch with a local Database:

```
docker compose --profile localdb up -d db
```

3. Tear down the stack:

```
docker compose down -v
```
